SUMMARY

Experienced software engineer of proven expertise in building scalable and highly performant systems. Skilled in back-end development, my expertise lies in developing robust backend systems and architectures that power scalable applications. During my career, I have built complex backend services, APIs, and data processing systems with a focus on performance, reliability, and maintainability. I enjoy tackling technical challenges that require deep system design knowledge and keeping up with new technologies.

EDUCATION

Government Engineering College, Bilaspur, Bachelor's degree in Electronics & Telecommunications August 2013 – September 2017
GPA: 7.99/10.00

EXPERIENCE

Senior Associate | JPMorganChase | Bengaluru, India May 2023 - Present

- **Cloud & Architecture Leadership:** Leading the migration of legacy data systems to AWS, designing robust architectures leveraging AWS Lambda, ECS, SQS, and SNS, ensuring high availability, security, and scalability.
- **ETL & Data Pipeline Engineering:** Designed and optimized scalable ETL pipelines using Databricks, PySpark, and OracleSQL, automating ingestion and transformation workflows to reduce manual effort by 30 % and improve processing efficiency.
- **Asynchronous Data Workflows and API design:** Designed a high-performance asynchronous request workflow using aiohttp and asyncio, resulting in a 50 % improvement in report upload speed. Optimized algorithms to handle high-volume requests with low latency, and developed API endpoints for dynamic report generation by integrating seamlessly with the calculation engine to ensure accurate and timely results.
- **Code maintainability efforts:** Developed and maintained comprehensive test suites using unittest, pytest, and regression testing frameworks to ensure code reliability and prevent regressions. Managed and optimized database components including packages, stored procedures, and query optimizations.
- **Led database migration efforts:** from Oracle to PostgreSQL, ensuring data integrity, compatibility, and performance optimization.
- **Worked on automated scheduled jobs** by writing robust Python scripts integrated with the Control-M scheduling tool, increasing operational efficiency and reducing manual interventions.
- **Collaborated with cross-functional teams:** by gathering requirements, resolving issues, and performing code reviews, promoting a cooperative and high-achieving work environment.

Senior Software Engineer, HashedIn by Deloitte | Bengaluru, India October 2021 - April 2023

- **Building Microservices using PySpark :** Worked on integrating content workflow microservices responsible for orchestrating various GCS (Global Content Services) capabilities, typically to process ingested content within the GCS pathway.
- **Building ETL Workflows for Data Ingestion and Processing :** Led efforts in building ETL pipelines for end-to-end processing and publishing of partitions-based and hierarchy- based organizational data using AWS services – SQS, Glue, Lambda, StepFunctions, CloudFormation among others.
- **Developing RESTful APIs:** Worked on building a back-end unified storage model for managing and accessing the content resources acquired and processed by the workflow that supports access via both Random Access (REST APIs) and Sequential Access (Spark/Parquet).
- **Building reusable python libraries :** Developed shared Python libraries to promote code reuse across teams and published them to the local JFrog Artifactory for streamlined access and integration.

Software Engineer, UFaber | Mumbai, India

September 2020 - October
2021

- **Building Onboarding Management System** : Created and refined on-boarding processes for both trainers and students, significantly enhancing user experience and resulting in a notable rise in active business users. Led the effort to build a feature that allows trainer admins to easily keep track of trainer attendance and payments.
- **Video Conferencing Integration for Online Classes**: Developed RESTful APIs using Flask for enabling google meet integration and auto storage of recordings and meet duration in database .
- **Learning Management System (LMS)** : Developed and implemented an internal content management system utilizing Express.js and MongoDB, updating the technology stack for enhanced scalability and performance. Built modular elements for question banks, quizzes, and course packages, facilitating efficient content creation and management.
- **RBAC-Enabled REST API Design and Development**: Experience in building RESTful applications with Role-Based Access Control (RBAC) authorization system for user access control.

Software Engineer, Happay - VA Tech Ventures | Bengaluru, India

December 2019 - July 2020

- **Travel Request Module (TRF)** : Developed and implemented CRUD services using Django to support a corporate travel request workflow, enabling users to seamlessly create, update, and manage travel bookings within the platform.
- **Passenger Booking Module and Ancillary Services**: Enhanced the passenger booking module by adding new features and integrating ancillary services such as corporate meal selection and baggage allowance options, through seamless integration with Verchaska APIs.
- **Mail Notification Engine**: Built an email notification engine using Django's inbuilt template library (Jinja2) and enabled efficient and scalable delivery of automated notifications with asynchronous task scheduler (Celery).

Software Engineer, BridgeLabz Solutions | Bengaluru, India

May 2019 - November 2020

- Contributed to the development of two task management products, designing and implementing core features using Python frameworks (Django) and relational database (Postgres), streamlining task tracking and workflow efficiency.
- Redesigned and enhanced the UI using JavaScript, jQuery, HTML5, CSS3, and Bootstrap, delivering a responsive and visually consistent user experience across browsers and devices.

CERTIFICATION

Databricks Certified Data Engineer Associate

Issued (December, 2024)

Databricks Certification

AWS Certified Developer – Associate

Issued (May, 2023)

Amazon Web Services (AWS)

TECHNICAL SKILLS

Languages: Python, Nodejs, JavaScript.

Web Development: Django, CherryPy, PySpark, Flask, FastAPI

Database: OracleSQL, PostgreSQL, MongoDB, DynamoDB

Cloud Technologies: AWS Glue, Lambda, CloudFormation, SQS, EC2, Athena, SNS, StepFunctions, S3.

Tools & Platforms: Git, Atoti , Databricks, Jenkins, Docker
