SUMMARY

Experienced Software Engineer with 6 years of expertise in designing and developing scalable, high-performance backend systems. Proven track record in building robust APIs, microservices, and data processing pipelines with a focus on reliability and maintainability. Skilled in solving complex technical challenges that demand deep system design expertise and a strong grasp of emerging technologies.

EXPERIENCE

Senior Software Associate | JPMorgan Chase | Bengaluru, India

May 2023 - Present

Managed end-to-end reporting and data processing workflows for middle office operations supporting 1,000+ business users. Led a team of 3 engineers to develop scalable automation for financial projections and rule-based calculations, supporting \$60M+ in balance sheet reporting. Consistently recognized as a top performer over a 2-year period.

- **Automated Template Processing and Calculator Engine:** Led the development of **PySpark** and **Databricks**-based event-driven architecture to ingest and transform large-scale financial data. Integrated with a rule-based calculation engine to automate balance sheet projections (assets, liabilities, income, losses) improving reporting accuracy and reducing manual effort by 40%.
- Enabled data accessibility for business users by loading curated datasets into the **Databricks Lakehouse**, supporting downstream analysis through reporting tools such as **Atoti**, **Tableau**, and **Power BI**.
- **Cloud & Architecture Leadership:** Led migration of on-prem legacy systems to **AWS Cloud** by designing scalable, secure, and highly available architectures leveraging **AWS Step Functions**, **Lambda**, **SNS**, **SQS**, and **S3**. Worked on database migration from **OracleSQL** to **Aurora PostgreSQL**, improving infrastructure performance, scalability, and reducing operational costs by 30%.
- **Asynchronous Uploads and Downloads:** Engineered high-performance asynchronous workflows using **Aiohttp** and **Asyncio** python libraries, improving report upload speed by 50%. Integrated dynamic report generation with rule-based engines.
- **Testing & Reliability:** Built robust test suites using **Pytest**, **Unittest**, and **Regression testing** frameworks. Managed and optimized database components including packages, stored procedures, and query optimizations.
- **Implemented CI/CD pipelines:** Set up and maintained multi-environment infrastructure using **Jenkins** (dev, staging, production) with environment-specific configurations and automated deployments, ensuring smooth release cycles.
- **Worked on automated scheduled jobs** by writing robust Python scripts integrated with the **Control-M** scheduling tool, increasing operational efficiency and reducing manual interventions.
- **Collaboration with cross-functional teams:** by gathering requirements, resolving issues, and performing code reviews, promoting a cooperative and high-achieving work environment.

Senior Software Engineer, HashedIn by Deloitte | Bengaluru, India

October 2021 - April 2023

- **Developed a microservices-based architecture for Data Ingestion:** Implemented backend microservices using **PySpark**, exposing RESTful endpoints to orchestrate Global Content Services (GCS) workflows. Enabled seamless interaction across services for processing ingested content at scale, with proper handling of state, retries, and error propagation.
- **ETL Workflow Development :** Built partitioned and hierarchy-based ETL pipelines using **AWS SQS**, **Glue**, **Lambda**, **Step Functions**, and **CloudFormation** to automate ingestion and publishing organizational data.
- **Unified Content Access APIs:** Engineered a backend storage model supporting both RESTful (Random Access) and **Avro/Parquet-based** (Sequential Access) interfaces for managing processed content.
- **Reusable Python Libraries:** Developed and published shared Python libraries to internal **JFrog** artifactory, enabling code reuse and faster integration across development teams.

Software Engineer, UFaber | Mumbai, India

Sep' 2020 - October 2021

- **Onboarding Management System** : Designed onboarding workflows for trainers and students, improving user experience and increasing active business users. Led the development of features for tracking trainer attendance and payment status.
- **Video Conferencing Integration for Online Classes**: Built RESTful APIs using **Flask** to integrate Google Meet, enabling automated recording capture and meet duration logging in the database.
- **Learning Management System (LMS)** : Enhanced the content management platform using **Express.js** and **MongoDB**. Implemented modular components for question banks, quizzes, and course packages to streamline content creation and delivery.
- **RBAC-Enabled REST API Design and Development**: Designed and implemented RESTful applications with Role-Based Access Control (RBAC) for secure, permission-based user access across all modules.

Software Engineer, Happay - VA Tech Ventures | Bengaluru, India

December 2019 - July 2020

- **Travel Request Module (TRF)** : Developed CRUD services using **Django** to manage corporate travel requests, allowing users to create, update, and track bookings within the platform.
- **Passenger Booking Module and Ancillary Services**: Improved the booking module by integrating third-party APIs (Verchaska) to support features like corporate meal selection and baggage allowance, enhancing user flexibility and experience.
- **Email Notification Engine**: Implemented a scalable mail notification system using Django's template engine (**Jinja2**) and **Celery** for asynchronous task scheduling, enabling automated and reliable communication across the platform.

Software Engineer, BridgeLabz Solutions | Bengaluru, India

May 2019 - November 2020

- Contributed to the development of two task management products, designing and implementing core features using Python frameworks (**Django**) and operational databases (**PostgreSQL**), streamlining task tracking and workflow efficiency.
- Redesigned and enhanced the UI using JavaScript, **jQuery**, **HTML5**, **CSS3**, and **Bootstrap**, delivering a responsive and visually consistent user experience across browsers and devices.

EDUCATION

Government Engineering College, Bilaspur

August 2013 – Sept' 2017

Bachelor's Degree in Electronics & Communications; CGPA: 7.99/10.00

SKILLS

Certifications: Databricks Data Engineer Associate, AWS Developer Associate.

Programming Languages: Python, Node.js, JavaScript.

Framework and Technologies: Django, CherryPy, Flask, FastAPI, PySpark, Pandas, AWS Cloud, Git, Atoti , Databricks, Jenkins, Docker.

Databases: Oracle SQL, PostgreSQL, MongoDB, DynamoDB
